Kunal Kurve

Software Development Engineer - I

KunalKurve | kunalkurve219 | kunal.kurve219@gmail.com | +91-7030884560

Experience

E42 (LIGHT INFORMATION SYSTEMS) | Trainee Engineer (GenAI)

Sept 2024 – Feb 2025 | Pune, MH

- Member of the GenAI team.
- Worked as a technical member of a POD-based engineering team after organizational restructuring, collaborating on AI-driven internal tools and customer-facing solutions.
- Improved chatbot accuracy from 20% to 95% for Arabic and RTL language workflows through response evaluation, NLP pipeline tuning, tokenization optimization, and intent classification enhancements.
- Developed a CNN-based skin analysis system for an Oracle partner, enabling real-time skin type detection and personalized product recommendations with 95% prediction accuracy.
- Reduced semantic search latency by 35% by optimizing embedding generation workflows and vector retrieval pipelines for NLP applications.
- Built Python-based automation pipelines to extract and structure data from unorganized PDF documents, processing 1000+ records weekly for internal operational workflows.
- Developed a ReactJS component integrated with Google Drive APIs for real-time file uploads and synchronized folder management.
- Integrated SharePoint POC services using Django REST Framework to automate backend workflows and improve secure document accessibility for internal teams.
- Key technologies used: Python, LangChain, FAISS, TensorFlow, Django REST Framework, ReactJS, AWS.

Projects

ECOMMERCE WEBSITE GitHub 2026

Tools and Frameworks Used: Spring Boot, Spring Cloud, MySQL, Hibernate, Redis, Razorpay Payment Gateway, Stripe Payment Gateway, JUnit, Kafka

- Architected a Microservices based ECommerce Platform with functionalities like Login, Authorization, Product Catalog, Payment Gateway Integration, Service Discovery, Notification Service etc.
- Deployed whole Ecosystem on AWS Elastic Beanstalk leveraging RDS for Data Persistence, CloudWatch for efficient Logging and Monitoring
- Implemented Event Driven Email Service using Kafka to allow sending emails at large scale across different services within the Platform.
- Implemented powerful sorting, filtering and paging to allow for efficient discovery of products.

AGENTIC AI ROOT CAUSE ANALYSIS SYSTEM GitHub • Live Demo 2026

Tools and Frameworks Used: Python, LangGraph, FAISS, Groq LLM

- Built an Agentic AI system for automated root cause analysis of equipment failures using LangGraph-based multi-agent orchestration workflows.
- Implemented RAG pipelines with FAISS vector retrieval for SOP document search, enabling contextual LLM-driven diagnostic reasoning.

Skills

LANGUAGES

Advanced: Java
Proficient: SQL, Data Structures and Algorithms
Familiar: Python, C++

LIBRARIES / FRAMEWORKS

Proficient: Spring Boot, JUnit
Familiar: Spring Cloud, LangChain, LangGraph,

TOOLS / PLATFORMS

Proficient: GitHub, Kafka, AWS, MySQL
Familiar: Docker

AI / ML

Familiar: GenAI, NLP, RAG, HuggingFace

Education

WOOLF UNIVERSITY

M.Sc. in Computer Science (via Scaler Neovarsity)

May 2025 -- Jan 2027 | Remote

CGPA: 4.0 / 4.0

CDAC

PG Diploma in Artificial Intelligence

Mar 2024 -- Aug 2024 | Pune, MH

Percentage: 82%

VISHWAKARMA INSTITUTE OF TECHNOLOGY

B.Tech in Instrumentation & Control Engineering

Aug 2019 -- May 2023 | Pune, MH

CGPA: 8.34 / 10.0

Achievements

- Developed NewsTracker at the Pebblo DAXA Hackathon, improving news processing speed by 15x using SafeLoader and Retriever.
- Secured Rank 31 in the C-CAT entrance examination for CDAC.
